Email2SMS

This system uses standard email for sending sms and has an intuitive user experience for those used to sending emails. The mobile number will prepend the email suffix **@sms.sp247.net**.

This demo message will be sent as SMS!

Figure 1, SMS is sent to 0046732111111

Parameters

Field	Case sensitive	Required parameter	Description
To address	No	Yes	The recipients' mobile number as part of an email address *
From address	No	Yes	Customer email address which maps against the customer's profile
Subject	No **	No **	Description of sending. If not set, default message from customer profile is used **
Body	No	Yes	The SMS message being sent

* Supported mobile number formats include:

+46732111111 (MSISDN)

0046732111111

07321111111 (National format, only supported in limited markets)

** Based on customer specific profile; subject can be used to change sender text, indicate bidirectional communication or as a customer's unique case sensitive key
